

外觀

## 一、操作面板说明

①压力指示。

②压力调节：调节压力的高低。

③操作显示屏。

④电源开关：可转开或关该电源开关。

## 二、操作方法

### 1.开机

(1.) 打上机器操作箱下右方的断路器接通电源。

(2.) 按下电源开关（带锁式开关），开关里的绿灯会亮（开关锁定时为电源接通）

(3.) 旋转调压阀，设定适当之压力。通常粘衫用的正常压力范围在：1.0-2.5kg/cm<sup>2</sup>. 压力

可调整的范围为：0-4.0kg/cm<sup>2</sup>。

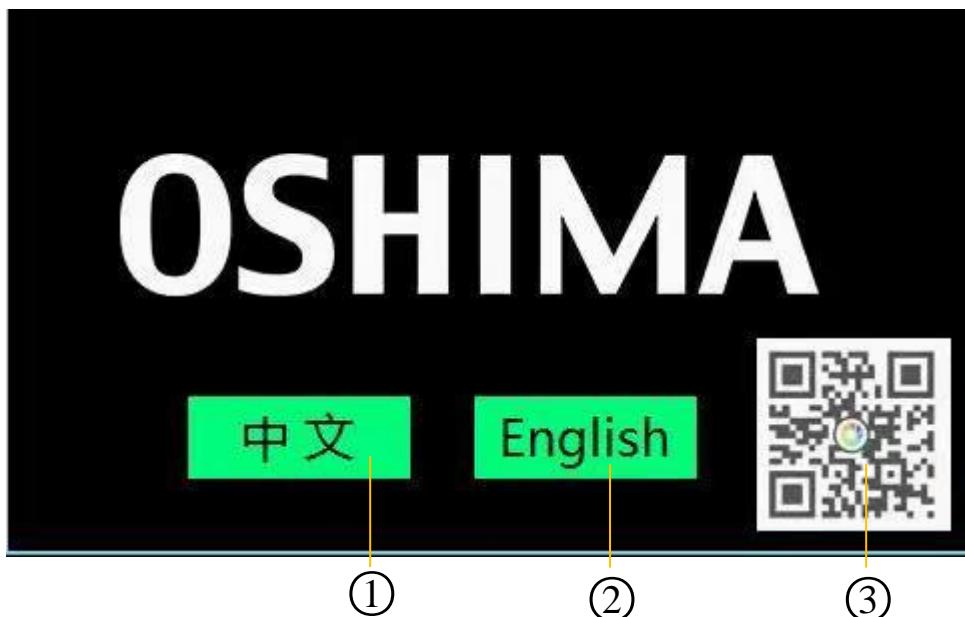

(4.) 完成工作后，将压力调整至“0”，再按下电源开关，解除锁定状态。

### 2.关机：

當壓襯工作完成後，機器仍是處於“高溫”下，將觸摸屏启动开关按下时状态显示延时停机中，当温度降至 60°C 时，机台会自动断电。

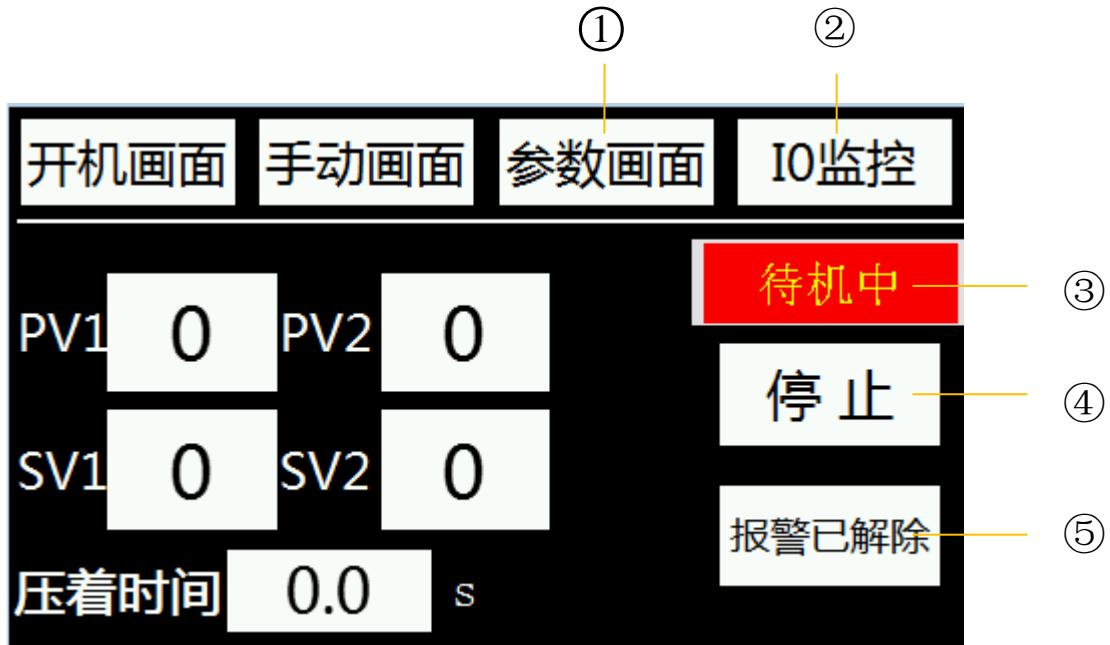

### 三、界面介绍

- 启动页面：开启电源，触屏显示开机画面如图，选择界面语言（中文/英文）后，进入下一页。

- ①按此键进入中文界面。
- ②按此键进入英文界面。
- ③扫此二维码可进入公司网站，了解欧西玛更多资讯。

2、自动页面：此画面仅供显示。

①按此键进入参数设置画面。

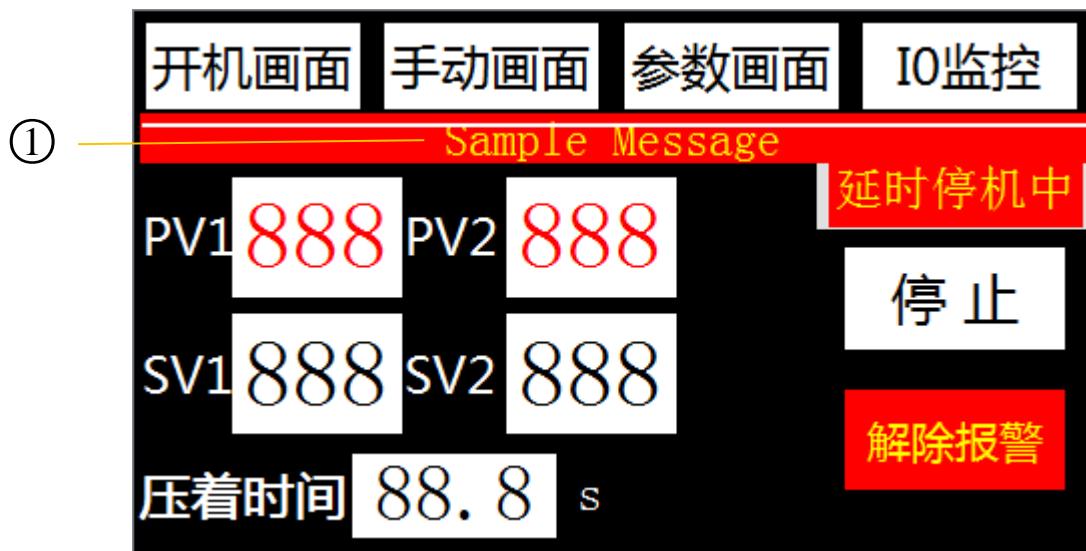

②按此键进入 PLC IO 监控画面。

③状态显示 1 待机中 2 运行中 3 延时停机中。

④启动/延时停机/停止按键。

⑤故障报警解除：故障排除后按此按键。

3、报警页面：

①报警故障显示。

#### 4、手动页面。

- ①前段设定温度。
- ②后段设定温度。
- ③加热控制开关。
- ④马达点动运转开关。
- ⑤按此键进入速度调节页面。
- ⑥手动点动修正电机正转。
- ⑦手动点动修正电机反转。

#### 5、速度调节页面：

压着时间					0.0 s	停止	自动画面
39	30	23	20	19			
18	17	16	15	14			
13	12.5	12	11.5	11			
10.5	10	9.5	9	8.5			
8	7.5	7	6.5	6			

6、参数页面：进入此参数画面密码：1269。

①修正马达延时正转时间

②修正马达延时反转时间

③修正马达跑偏报警时间

④设定停机温度

①按此键恢复出厂设置。

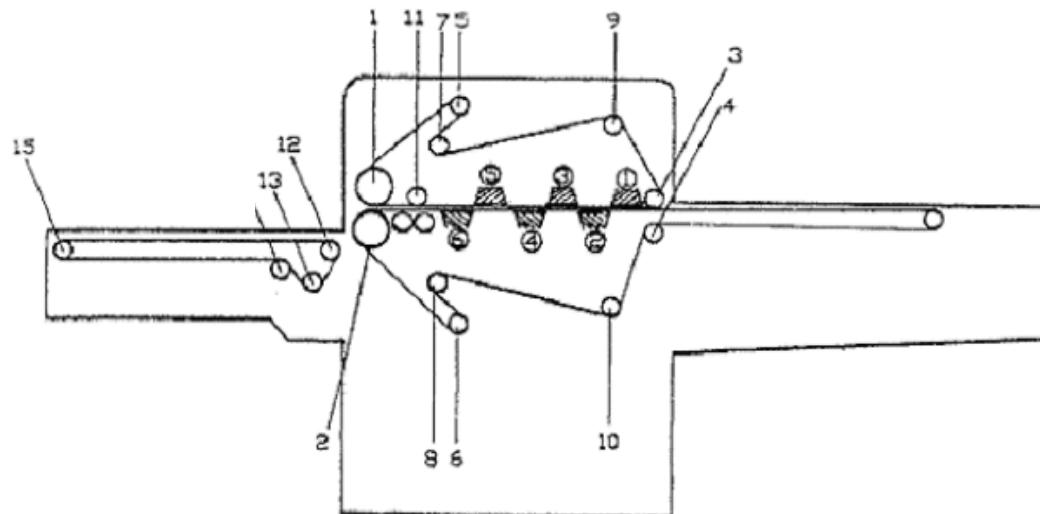

## 7、IO 监控页面：

自动画面		手动画面		参数画面		IO监控	
X0	上修正感应	X5	急 停	Y3		加 热	
X1	下修正感应	X6	断电信号	Y4		下修正 ( 正转 )	
X2	左限位	Y0	1加热固态	Y5		下修正 ( 反转 )	
X3	右限位	Y1	2加热固态	Y6		上修正 ( 正转 )	
		Y2	延时断电	Y7		上修正 ( 反转 )	

## 四、如何更换皮带清洁杆：

1. 该清洁杆是与拔片装置或刮片装置一起装在机器的后方。在恰可接触到上 / 下皮带位置。
2. 拉下拔片设置或刮片装置。
3. 该清洁杆是装置
4. 在拉出锁钉之后，可轻易的将清洁杆滑出取下。
5. 选用纯棉布作为更换之布，但不可用厚布，以免伤及皮带。
6. 但不要包上太多布，一般 3—4 层为宜以免造成材质分离不均衡。

## 五、内部组件

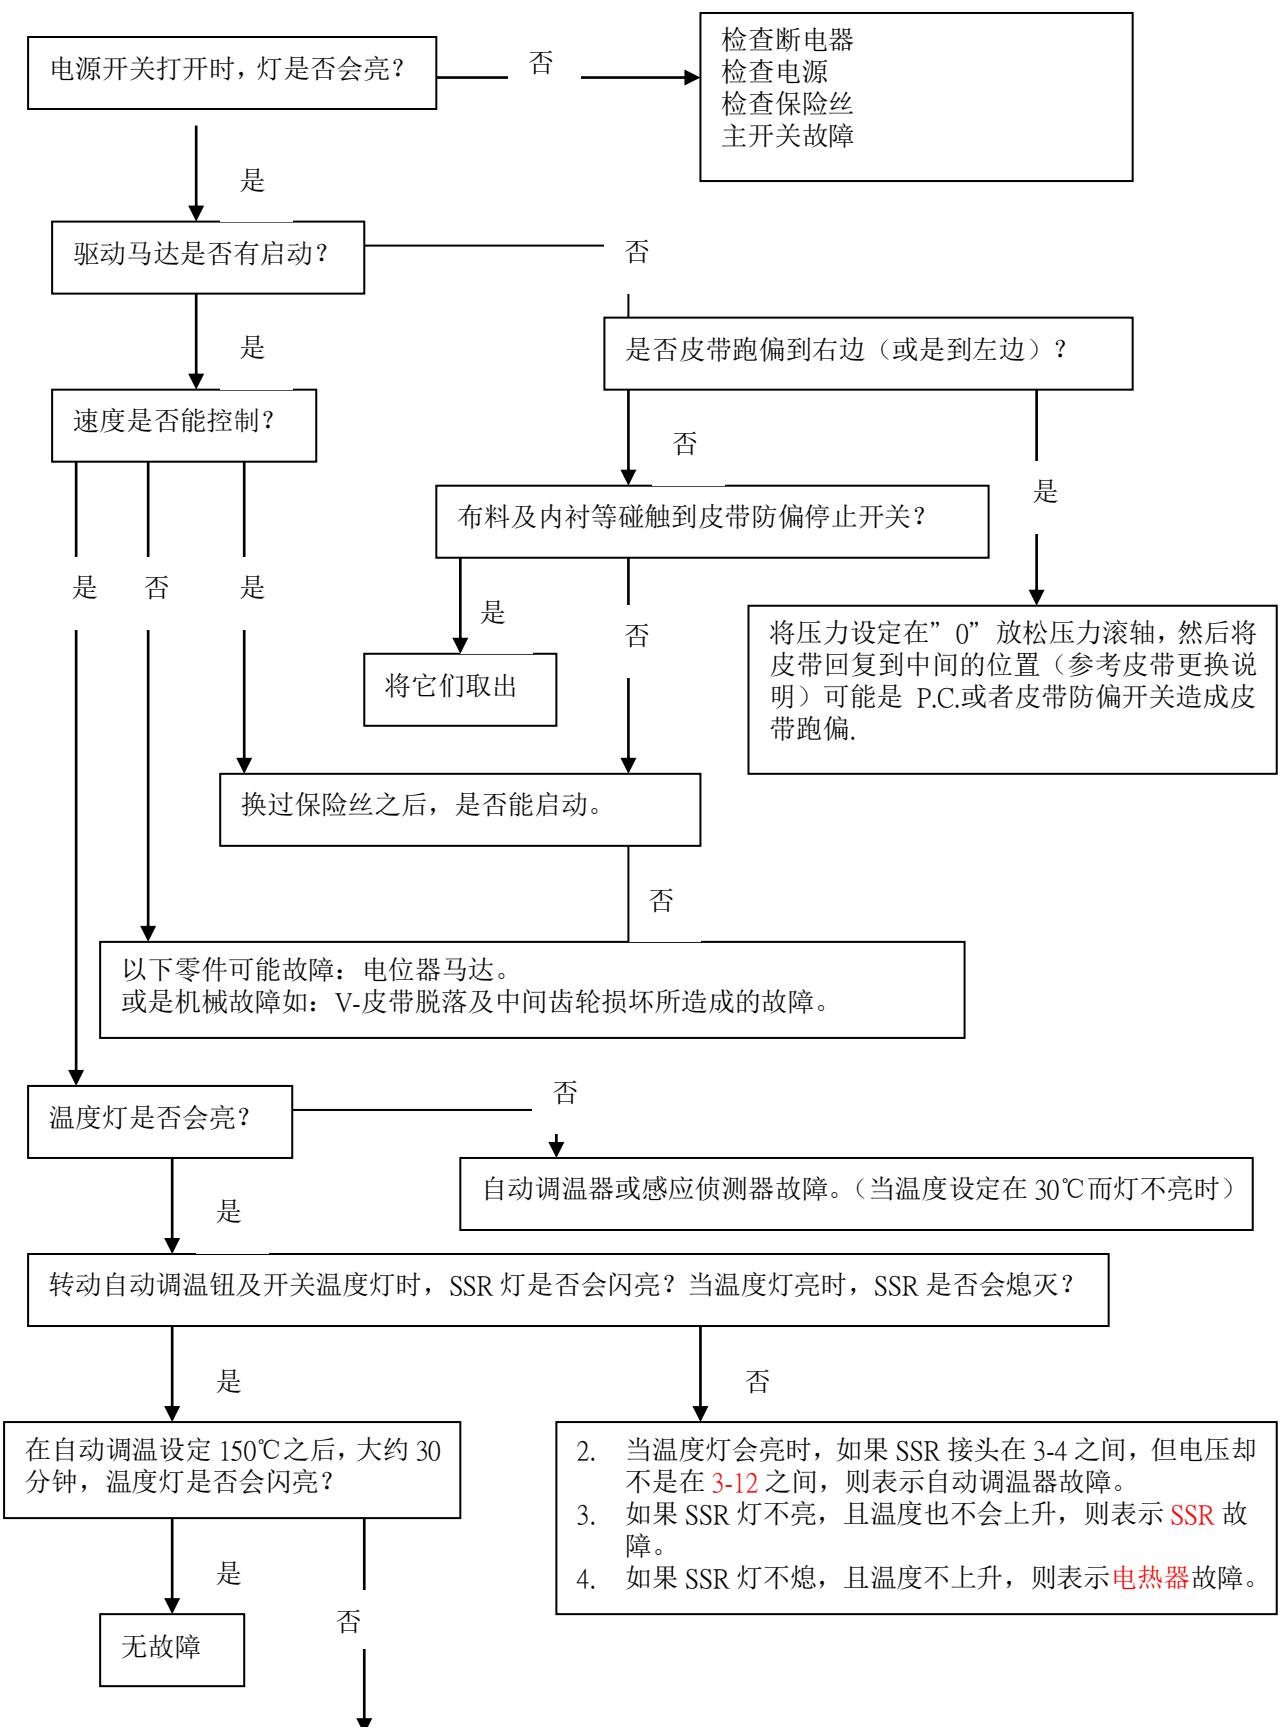

1. 压力滚筒（上）
2. 压力滚筒（下）
3. 进料滚筒（上）
4. 进料滚筒（下）
5. 副张力滚筒（上）
6. 副张力滚筒（下）
7. 张力滚筒（上）
8. 张力滚筒（下）
9. 防止皮带跑偏滚筒（上）
10. 防止皮带跑偏滚筒（下）
11. 波纹滚筒
12. 13. 直线式输送滚筒（前）

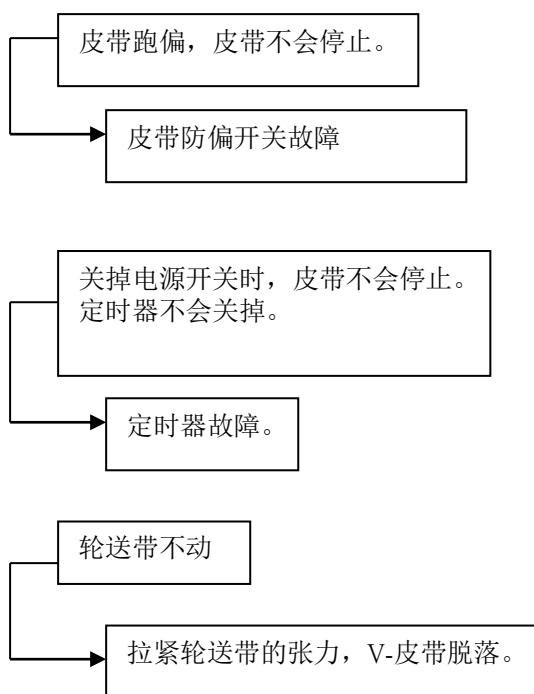

\*5, 6 滚筒可调整作前，后滑动 \*3, 11, 滚筒可作上，下滑动

电热片的组合设定 前/后 组合

## 六、故障排除

- 其他：**
1. 如果温度灯不亮，且 SSR 灯不熄，则表示温度的感应侦测器故障。
  2. 如果温度灯及 SSR 灯都不亮，且温度不降，表示 SSR 故障。
  3. 如果温度灯不熄，且温度不降，表示自动调温器故障。

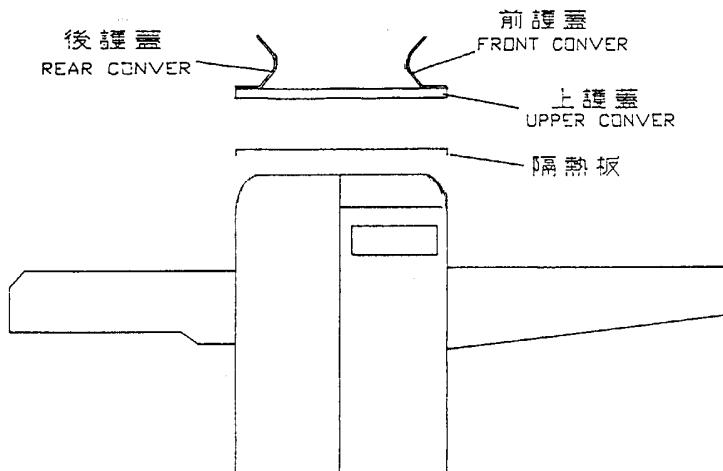

☆为了避免机械故障，请务必给驱动部份的零件上油作润滑。

## 七、注意事项

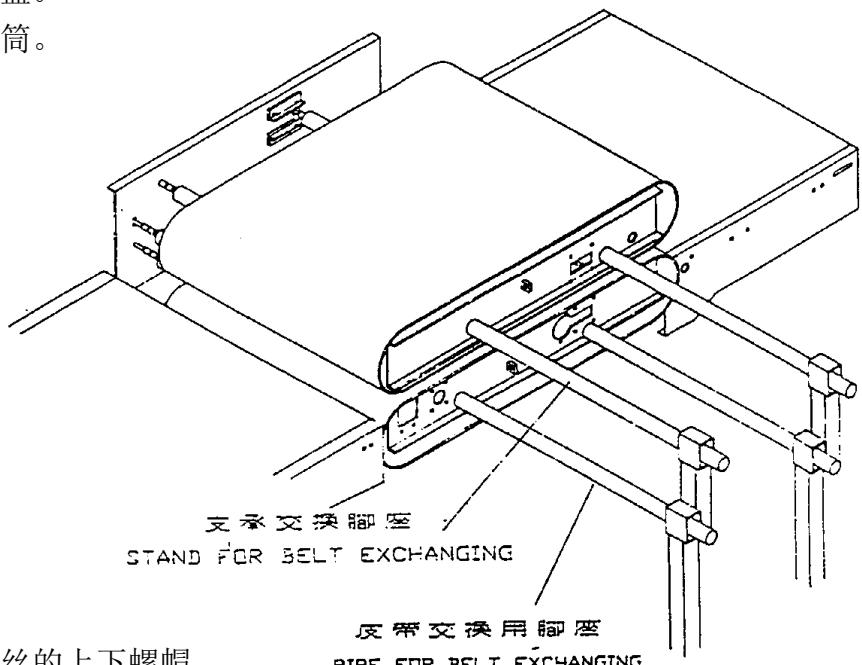

要根据所要作的内衬及布料的材质，来决定压衬所要设定的温度，压力及粘衬时间。

1. 请仔细查对适当的压衬条件（如温度，压力，及粘衬时间）。
2. 虽然皮带表面涂覆铁弗龙以作防热之用，但是利器及铁质碎片及会造成皮带破损。
3. 所以要非常小心，不要将针，原子笔，或剪刀等东西放在皮带里。
4. 机器触摸屏内部参数，出厂前已设定好，切勿随意调节，否则会影响机器的正常运行。  
    用户只需设定所需的温度即可。
5. 不要把内衬反面倒放在皮带上，否则产品会被夹进上皮带的张力滚筒内。
6. 如果内衬本身超过布本身之范围，产品也有可能被夹进下皮带的张力滚筒内。
7. 偶尔要打开侧盖查看产品是否有夹进在张力滚筒内。
8. 请根据机器之使用状况，适时更换清洁布。
9. 要除去贴在皮带上之树脂相当困难，但如果用皮带清洁液，就能轻易清除。
10. 每个月或每两个月要给轴承及齿轮上油。
11. 请将机器调整水平后再开机运行。

## 如何更换皮带

1. 向机器后方的方向拉下拔片装置或刮片装置。
2. 打开前后盖将它们往侧边拉出。
3. 取下上盖及隔热板。
4. 将压力调到“0”位置，松开锁在压立柄上之螺丝。
5. 压立柄向左转，并将它取下。
6. 将左右侧盖取下。
7. 松开防偏急停开关固定螺丝将开关旋开以不影响皮带取出为准。
8. 稍微抬起后输送带即可取下螺丝一共6个，左右边各3个。
9. 稍微抬起工作台即可取下螺丝一共6个，左右边各3个。
10. 取下张力滚筒出口的外盖。
11. 取下张力弹簧及张力滚筒。
12. 取下主架轴。

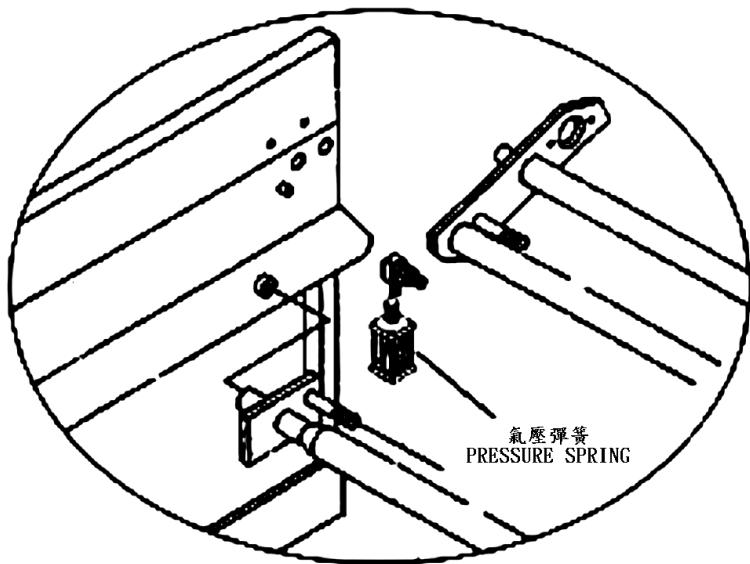

13. 取下右边压力弹簧上螺丝的上下螺帽。
14. 取下压力弹簧。
15. 取下固定上下主架之5个螺丝钉。
16. 抬起更换皮带用管，并将脚架放在管端部，然后从主架间之开口处拉出皮带。

### ※注意事项：

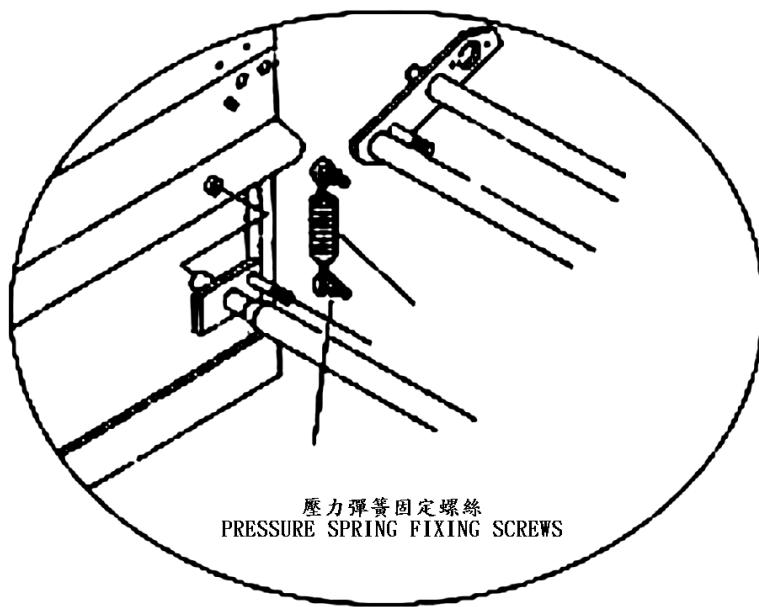

1. 拉出皮带时要小心，不要让皮带接触到异物。（如微动开关、铁件边角等异物。）
2. 主架上有组合的记号，在组合机器时务必对好记号然后锁紧主架上的螺丝。
3. 更换新皮带之后，须重新调节机器的压力。
4. 组合完成后，将皮带速度设在35秒，等到皮带作2个循环后，确认无异常即可正常使用。

## 八、加压方式

### 1. 气动加压方式

### 2. 弹簧加压方式

## 十.备用品之使用方法及说明 :

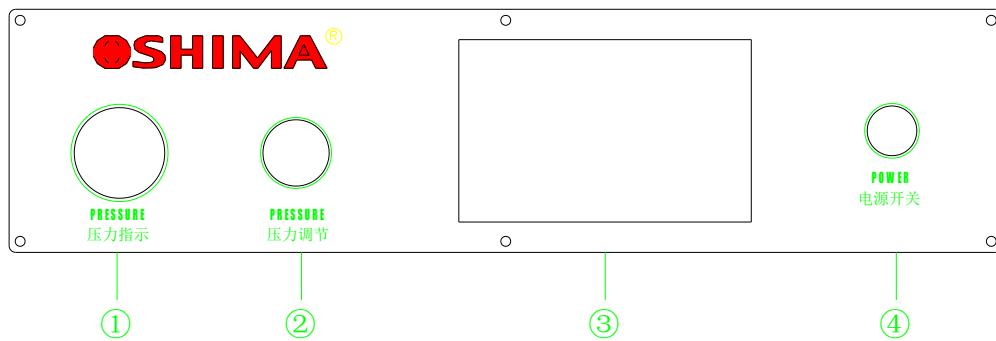

### 1. 耐温油 (白色)

方法：将机油倒入后硅胶滚输边的油盖。

说明：白色的油脂可运用到修正螺杆及培林上使机器更容易运转。

### 2. 拉力弹簧：运用在拉力簧上，待拉力滚筒弹簧失效后便可更换之。

## I. OPERATION PANEL:

- ① Pressure Indicator
- ② Pressure Adjust: Adjust the pressure level
- ③ Operation Display Panel
- ④ Power Switch: Turn on/ off the power.

## II. OPERATION INSTRUCTIONS:

### 1. Turn on

- (1.) Turn on the circuit breaker switch on the right under the operation box of the machine.
- (2.) Press the power switch (Lock switch), the green lamp will be lit. (When the switch is locked, the power is on; when released the lock, the cooling system is running and the indicating lamp on the left side will be light.) Set up the speed switch (timer button), and the motor is running.
- (3.) Turning the thermostat button and setting up the suitable heating temperature of the front and back heater.
- (4.) Turning the fusing timer button for setting the suitable fusing time. (The shortest fusing time is 5 seconds.)
- (5.) Turning the pressure handle on the left side of the operating box, and setting the suitable pressure. The normal pressure is around 1.0-2.5kg/cm<sup>2</sup>. The adjusting pressure range is around 0- 4.0kg/cm<sup>2</sup>.
- (6.) After working, please adjust the pressure to "0", and press the power switch. When lock status is released, the machine will start cooling. When temperature decrease to 60°C, the machine will automatically stop.

### 2. Turn off the machine

After finishing the fusing process, it will be at a high temperature. Tap the power switch

on the screen, it will show shutdown delay, then the machine will shut down automatically while the temperature cools down to 60°C.

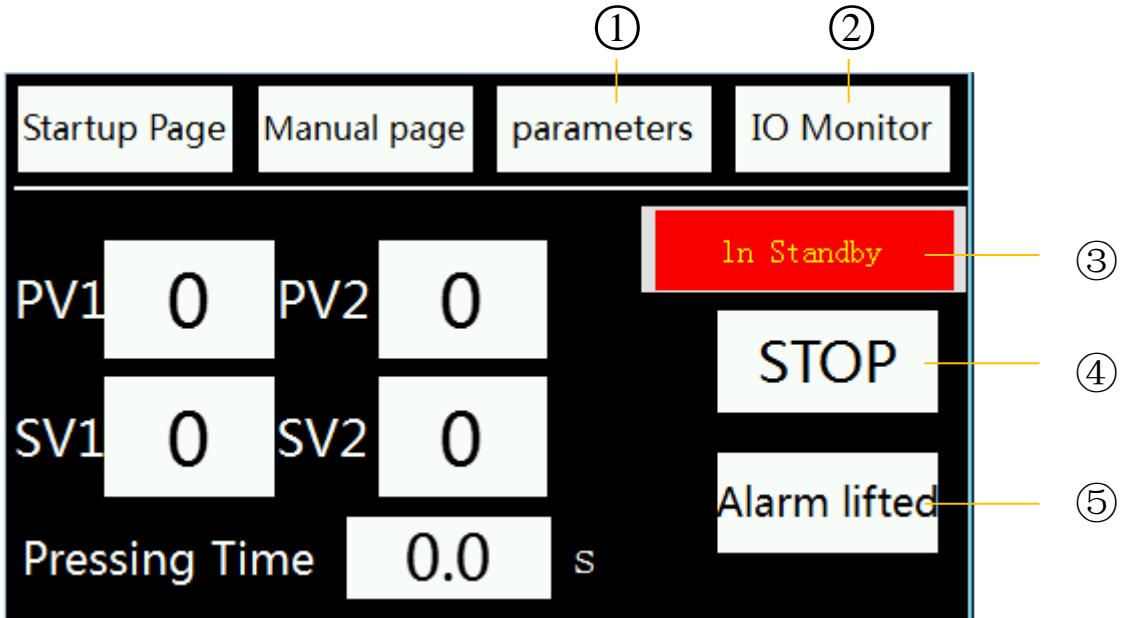

### III. Interface

1. Startup Page: Turn on the power, the touch screen will display the startup page as shown in the image below. Select the language (中文/English) to enter the next page.

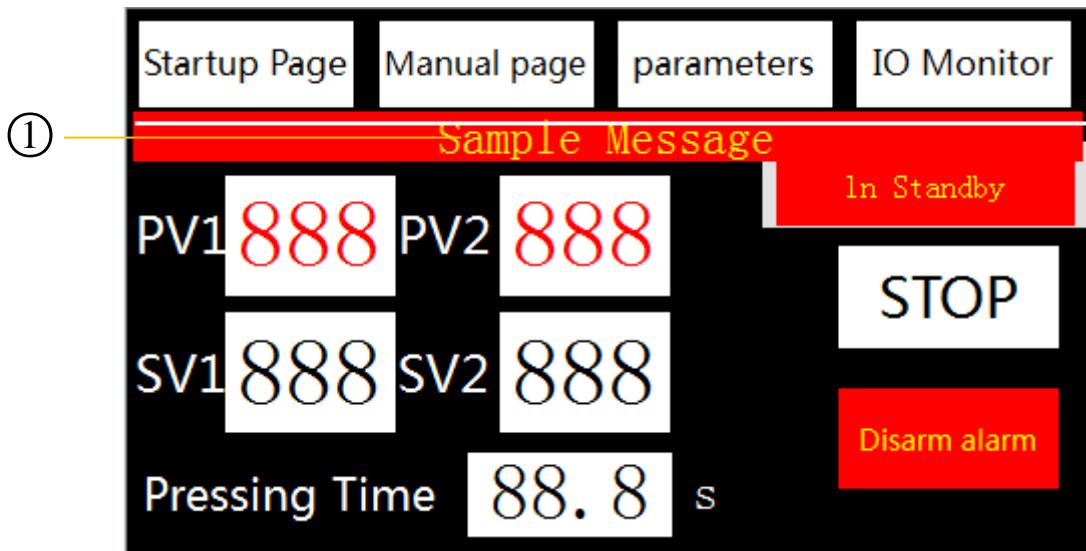

- ① Tap "中文" to enter the Chinese interface.
- ② Tap "English" to enter the English interface.
- ③ Scan this QR Code to enter the official website to learn more about OSHIMA.

2. Automatic page: This page is for inspecting only.

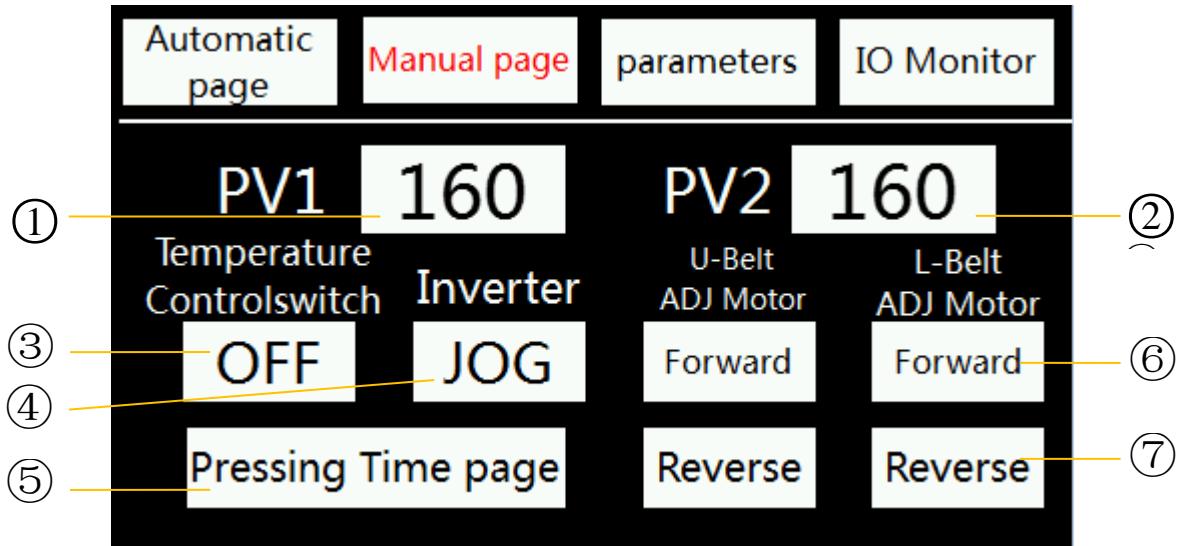

- (1.) Tap "Parameters" to enter the Parameter Setting Page.
- (2.) Tap "IO Monitor" to enter the PLC I/O Monitor Page.
- (3.) The displaying status 1. In Standby 2 Running 3 Shutdown Delay
- (4.) Startup / Shutdown Delay/Stop.
- (5.) Alarm lifted: Tap "Alarm lifted" after troubleshooting.

3. Alarm Page:

- (1.) Failure alert displayed

#### 4. Manual Page

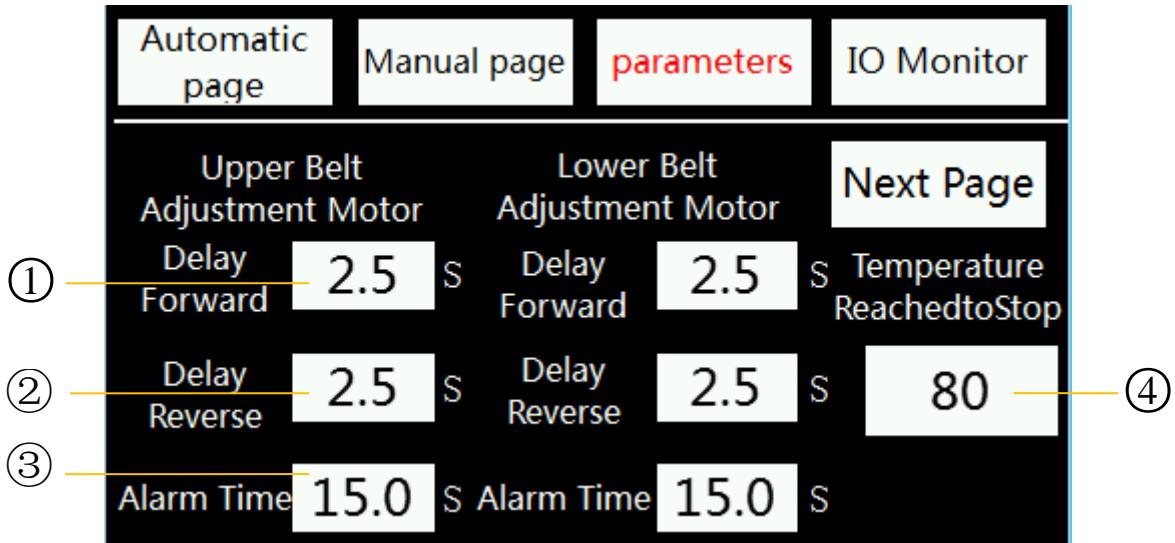

- (1.) Front Zone Temperature Setting
- (2.) Rear Zone Temperature Setting
- (3.) Heating control Switch
- (4.) Motor jogging operation
- (5.) Tap “Pressing time page” to enter the “speed adjustment page”.
- (6.) Manual belt adjustment jogging Motor Forward Rotation
- (7.) Manual belt adjustment jogging Motor Reverse Rotation

#### 5. Speed adjustment page

Pressing Time	0.0	s	Stop	Automatic page
39	30	23	20	19
18	17	16	15	14
13	12.5	12	11.5	11
10.5	10	9.5	9	8.5
8	7.5	7	6.5	6

6. Parameters Page: The code for entering this page is “1269”

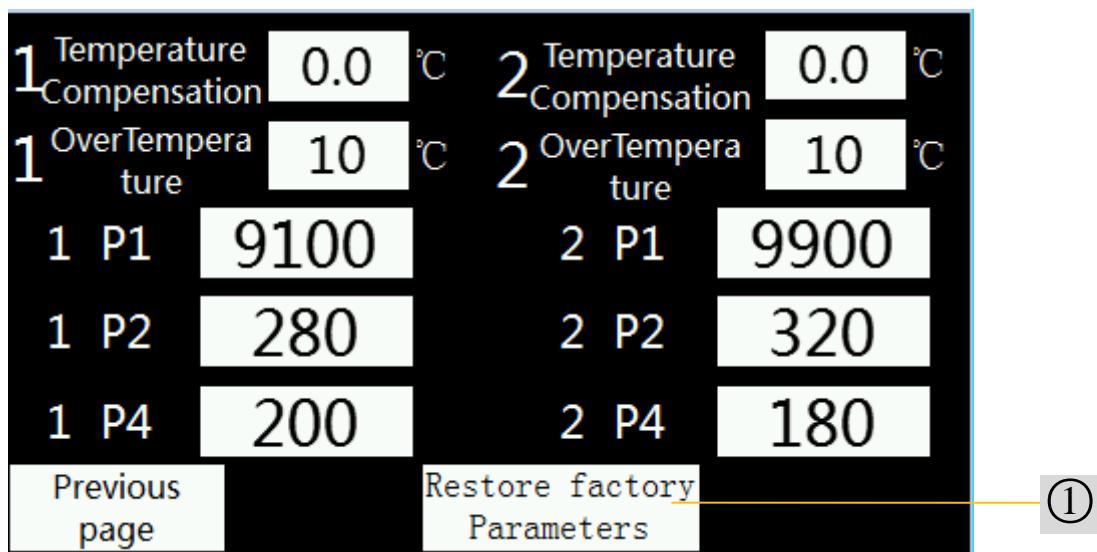

(1.) Belt adjustment motor forward rotation delay time

(2.) Belt adjustment motor reverse rotation delay time

(3.) Belt adjustment motor belt deviates alarm time

(4.) Set the temperature to stop the machine.

(1.) Tap here to restore factory parameters

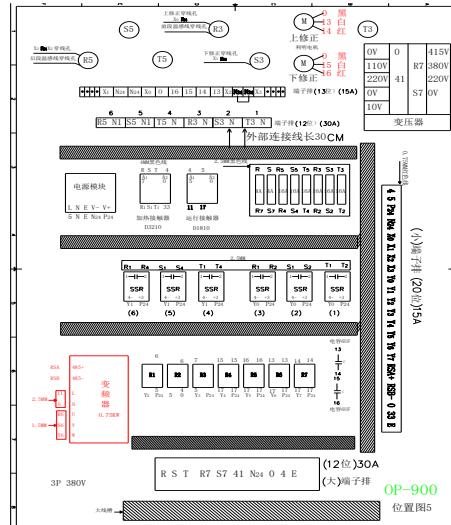

## 7. IO Monitor Page

Automatic page	Manual page	parameters	IO Monitor
X0	U-Belt ADJ Sensor	X5	Stop
X1	L-Belt ADJ Sensor	X6	Power Failure Signal
X2	Left Limit	Y0	1 SSR
X3	Right Limit	Y1	2 SSR
		Y2	Delay Stops
		Y3	Heating
		Y4	Lower Belt Adjustment Motor Forward Rotation
		Y5	Lower Belt Adjustment Motor Reverse Rotation
		Y6	Upper Belt Adjustment Motor Forward Rotation
		Y7	Upper Belt Adjustment Motor Reverse Rotation

## IV. HOW TO REPLACE THE BELT CLEANING ROD :

- (1.) The cleaning rod and scraper device are attached to the back of the machine.
- (2.) Take out the scraper device.
- (3.) The cleaning rod is attached to the position that can touch the upper and lower belt.
- (4.) When loosening the screw, the cleaning rod can be easily taken away. .
- (5.) Using the cotton cloth for replacing the cover of the rod, don't use the thick and rough cloth in order to prevent the belt from being damaged.
- (6.) Wrap 3 to 4 layers of cloth with rod to have the best cleaning result.

## V. INNER COMPONENTS :

- (1.) Pressure roller (Upper)
- (2.) Pressure roller (Lower)
- (3.) Feed-in roller (Upper)
- (4.) Feed-in roller (Lower)
- (5.) Sub tension roller (Upper)
- (6.) Sub tension roller (Lower)
- (7.) Tension roller (Upper)
- (8.) Tension roller (Lower)
- (9.) Belt warping prevention roller (Upper)
- (10.) Belt warping prevention roller (Lower)
- (11.) 11 . Moiré roller
- (12.) Straight conveyor roller (Front)

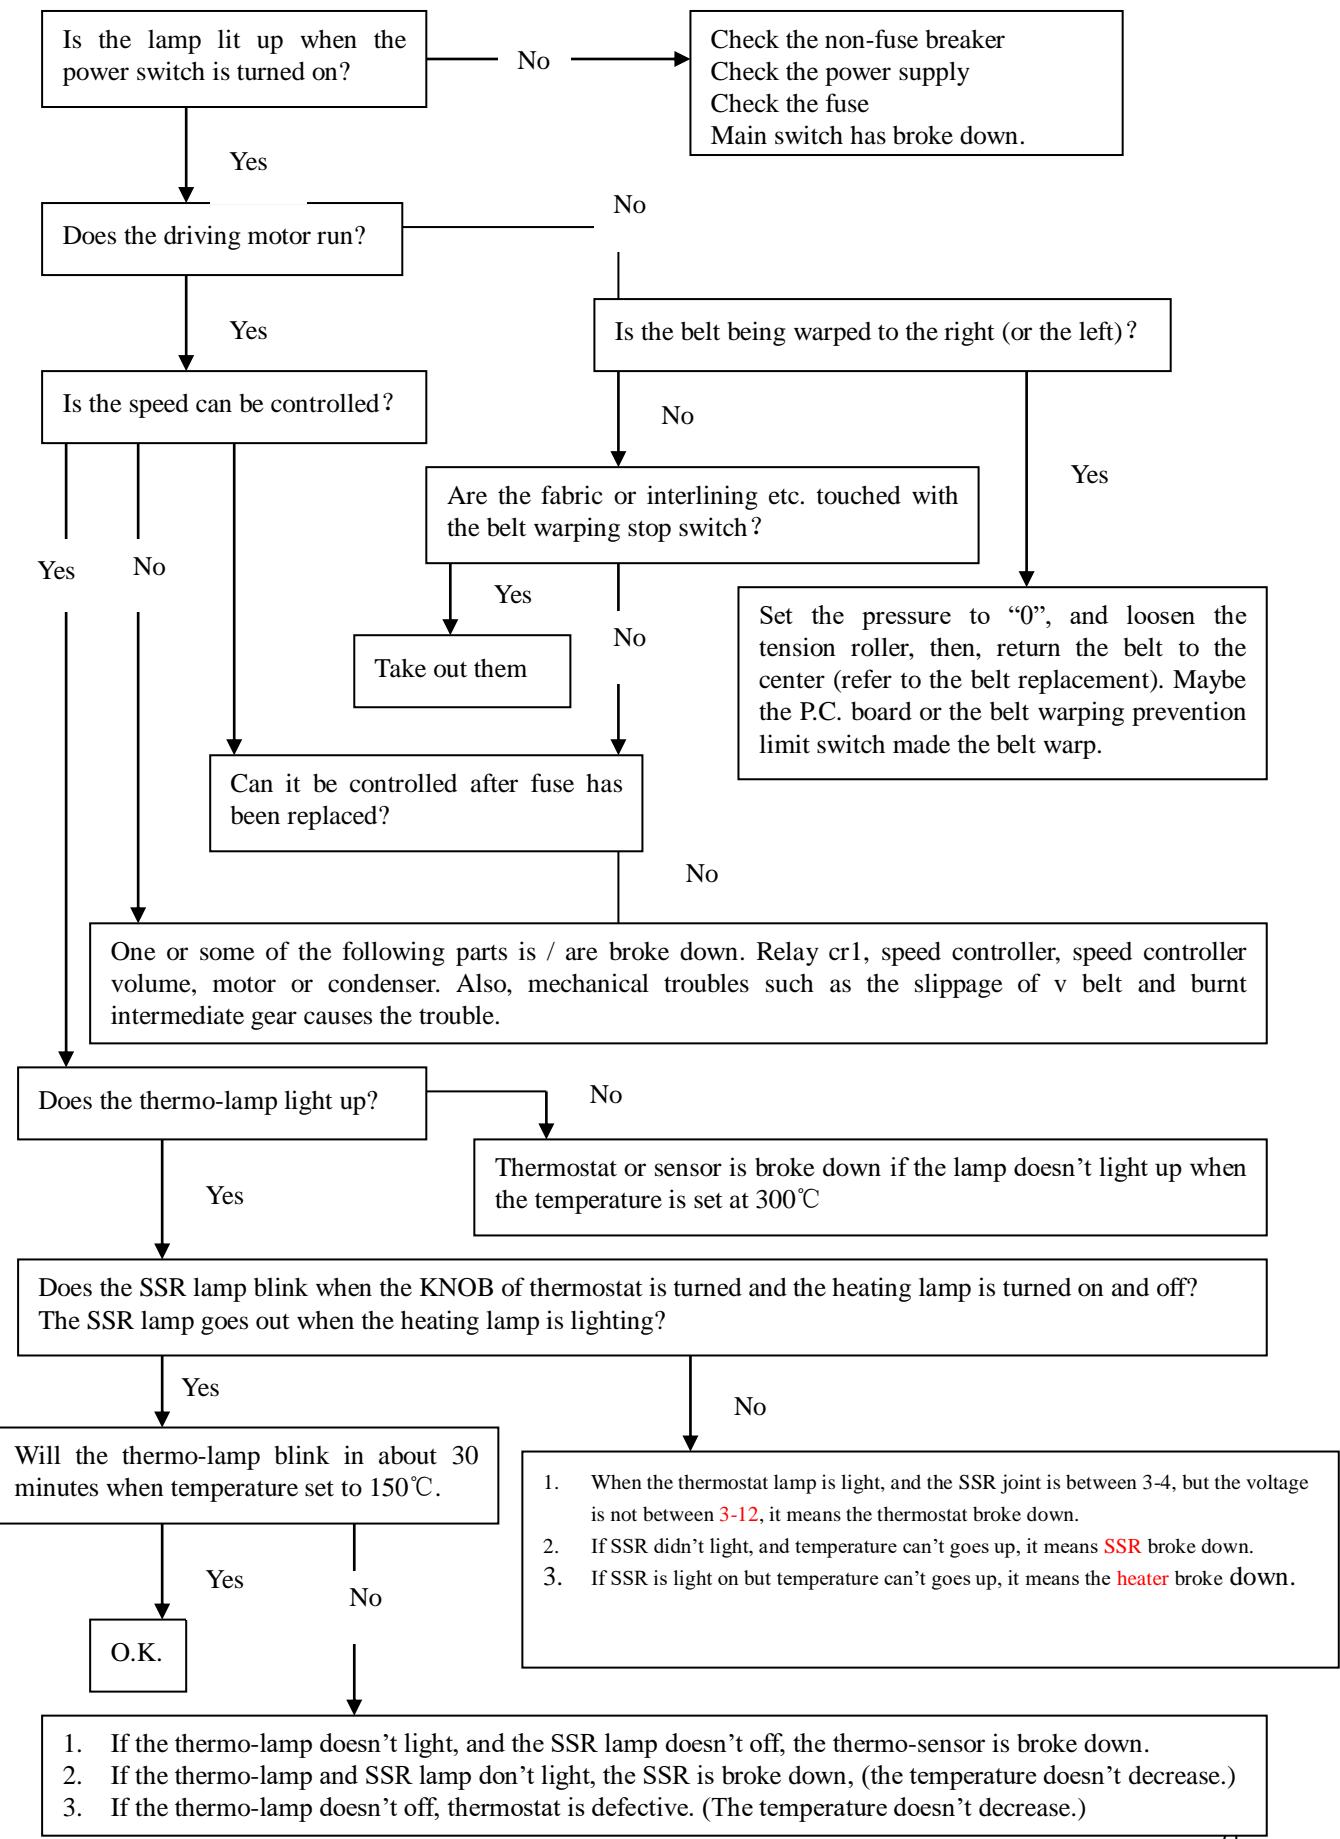

\*Roller 5,6,13,15 can be adjusted to slide forward and backward.

\*Roller 3,11can be adjusted to slide up and down.

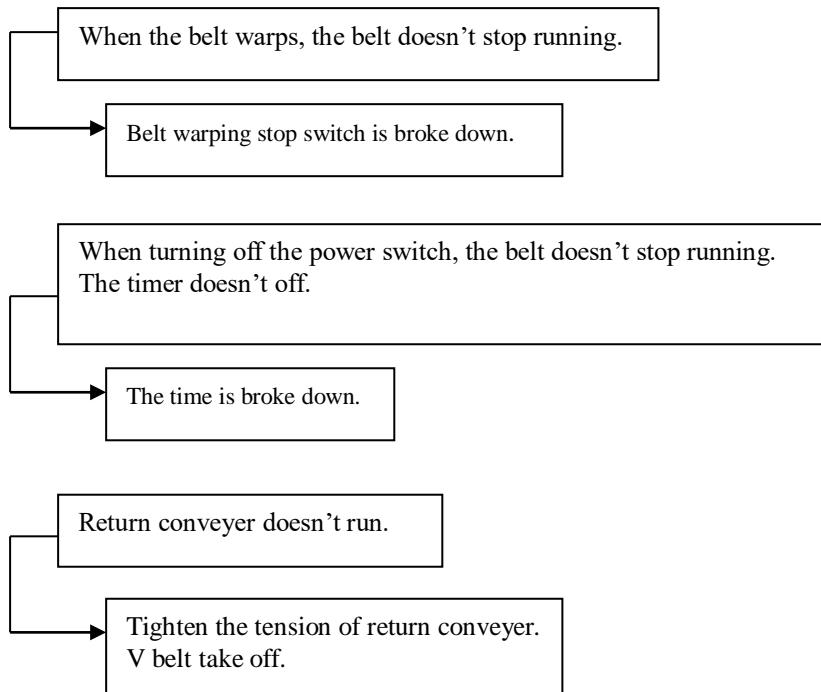

Setting combination of the heaters

Font /Rear Combination

## VI. TROUBLESHOOTING :

## OTHERS:

※In order to prevent mechanical trouble, Be sure to lubricate and grease-up the driving section.

## VII. NOTE :

Please set up the temperature, pressure and fusing time for fusing according to the material of fabric and interlining.

- (1.) Please check the suitable fusing conditions. (Such as temperature, pressure and fusing time.)
- (2.) Although the surface of the belt is coated with Teflon material for heat proofing, but the sharp tools or ferrous pieces still will damage the belt.
- (3.) Please be careful, don't put the needle, pen or scissors onto the belt.
- (4.) Don't put the interlining upside down on the belt, or it will be caught in the tension roller of the upper belt.
- (5.) If the interlining is too long and over the fabric, it will be caught in the tension roller of the lower belt.
- (6.) Please open the side cover to check whether interlining has caught in the tension roller sometimes.
- (7.) Replace the cloth of the cleaning rod with a new cover before it gets dirty.
- (8.) It is very hard to remove the glues adhered to the belt, but it can be cleaned up easily with "belt cleaner".
- (9.) Lubricates the bearings and gears every month.
- (10.) Please make sure to open the machine and operate it after adjusting the machine to level.

## VIII. HOW TO REPLACE THE BELT :

- (1.) Take out the rotary strip-off device or scraper backward the machine.

- (2.) Open the front and back cover.

- (3.) Lift the upper cover and adiabatic plate.

- (4.) All the parameters are set at the factory.

Please do not adjust the parameters.

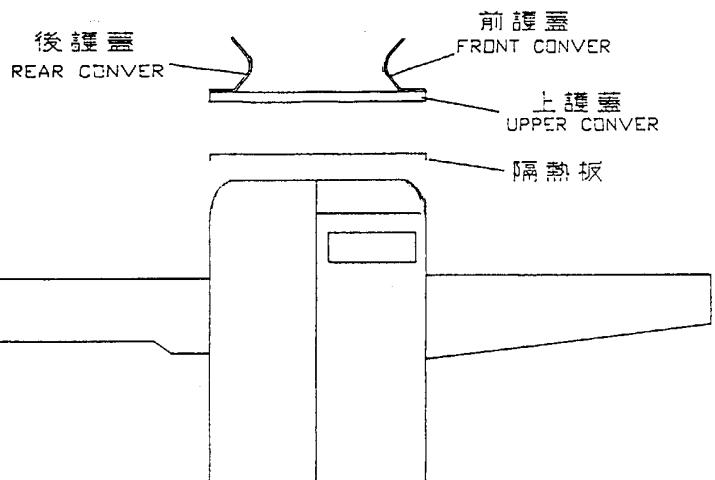

The user only has to set the needed temperature.

- (5.) Adjust the pressure to "0", and lose the screw of the pressure handle.

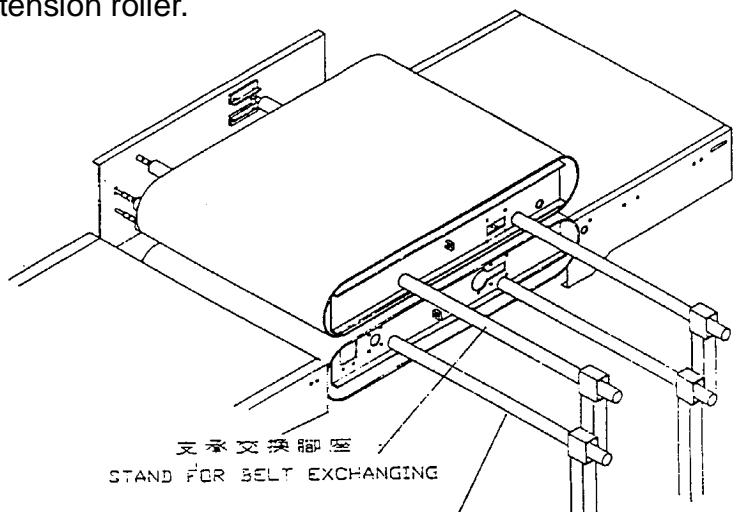

- (6.) Turn the pressure handle to the left, and take it off.

- (7.) Remove the left and the right covers.

- (8.) If the machine is return type, please loose the screw of the roller at the front of the conveyor belt.

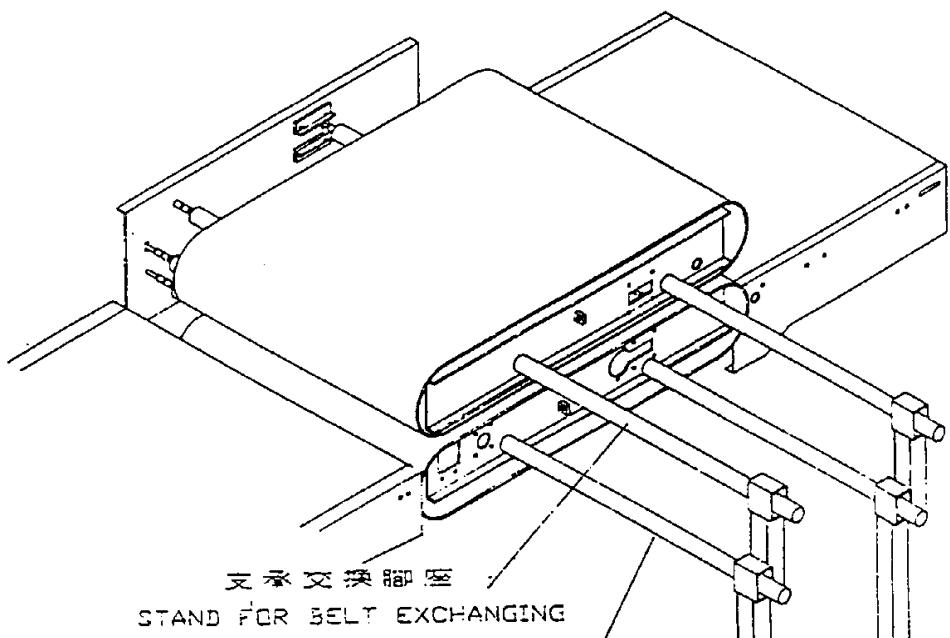

- (9.) Lift the back conveyor belt and there are 4 pieces of screw that can be taken out. 2 each on the left and the right side.
- (10.) Lift the working table and there are 4 pieces of screw can be taken out. 2 each on the left and right side.
- (11.) Remove the cover which is in front of the exit of the tension roller.
- (12.) Take out the tension spring and tension roller.
- (13.) Remove the frame shaft.

- (14.) Take off the nuts (upper & lower) of the right pressure spring fixing screws. \*As the nut is double type, please use the spanner to loosen the nut.
- (15.) Remove the pressure spring.
- (16.) Loose the 5 screws which are fixed in the upper and lower main shelf. Lift the pipe, which is used for replacing the belt, and put the stand to support the pipe, and then take out the belt.

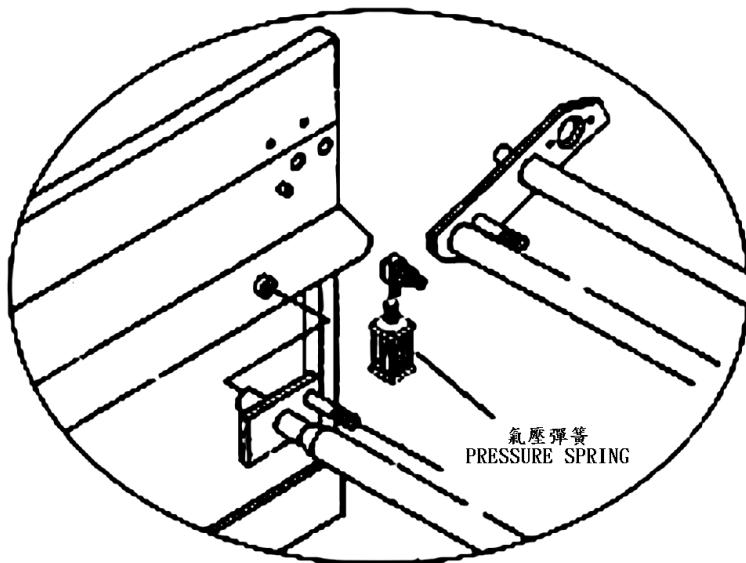

**※NOTE :**

- (1.) Please take out the belt carefully, don't let the belt touch the belt warping prevention limit switch.
- (2.) There is a mark on the main shelf to let you know how to combine the parts. Please follow it to combine the parts.
- (3.) After replacing the new belt, the tension spring must be attached at the same time.
- (4.) After combining all the parts, please set up the belt speed of the belt at 35 seconds. When the belt runs 2 circles and then the machine can be working as usual.

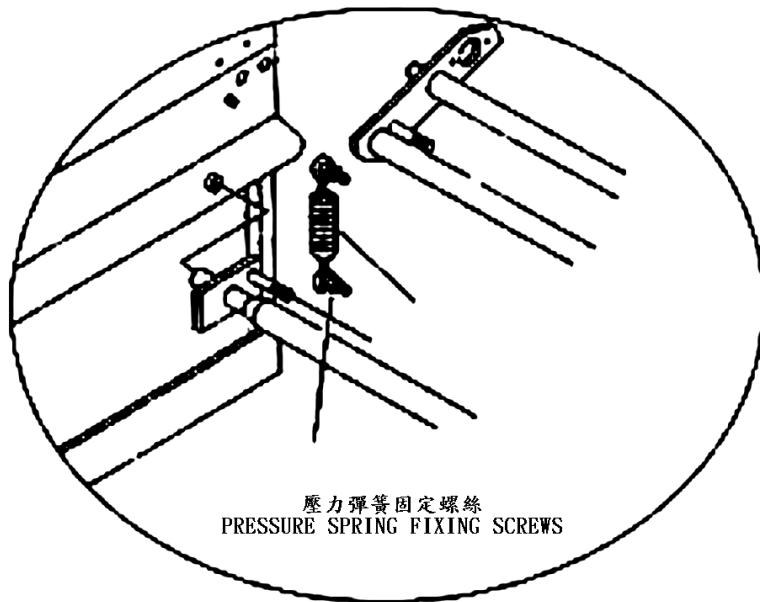

## IX. The pressure type :

### 1. Pneumatic type

### 2. Spring type

### 3. The description of spare parts:

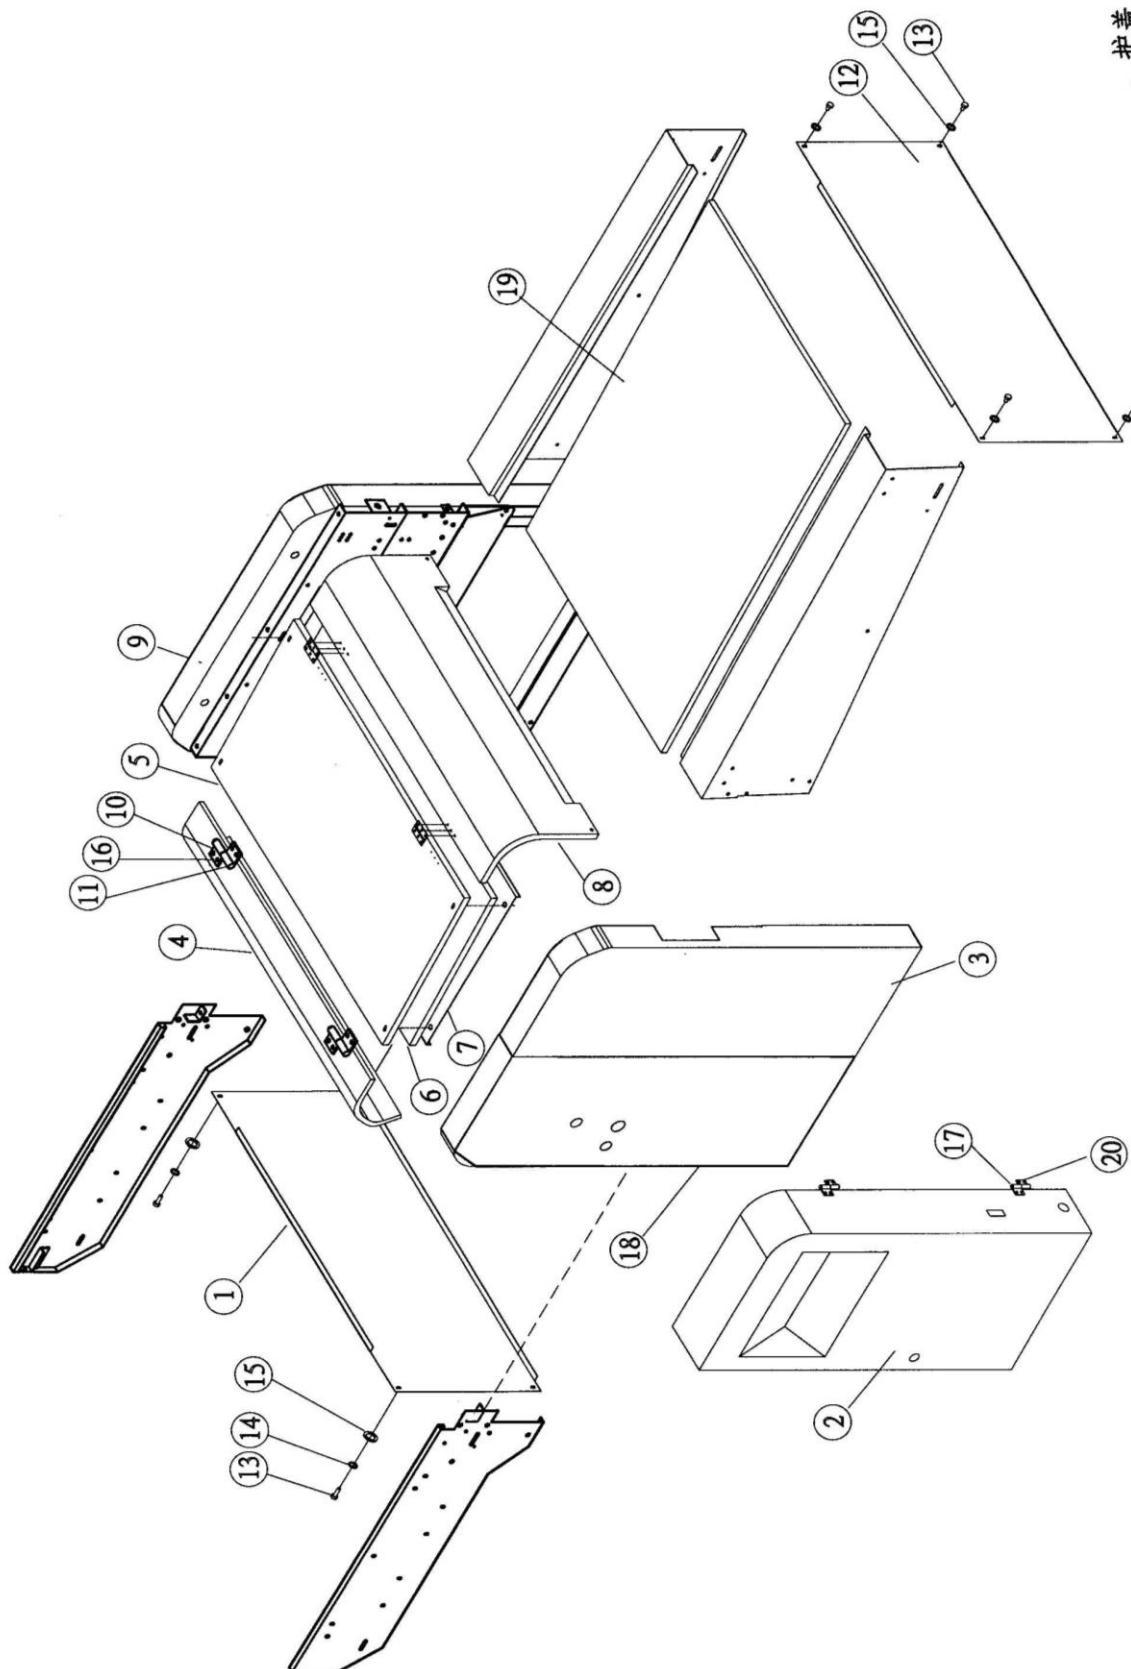

#### (1.) Heatproof oil (white)

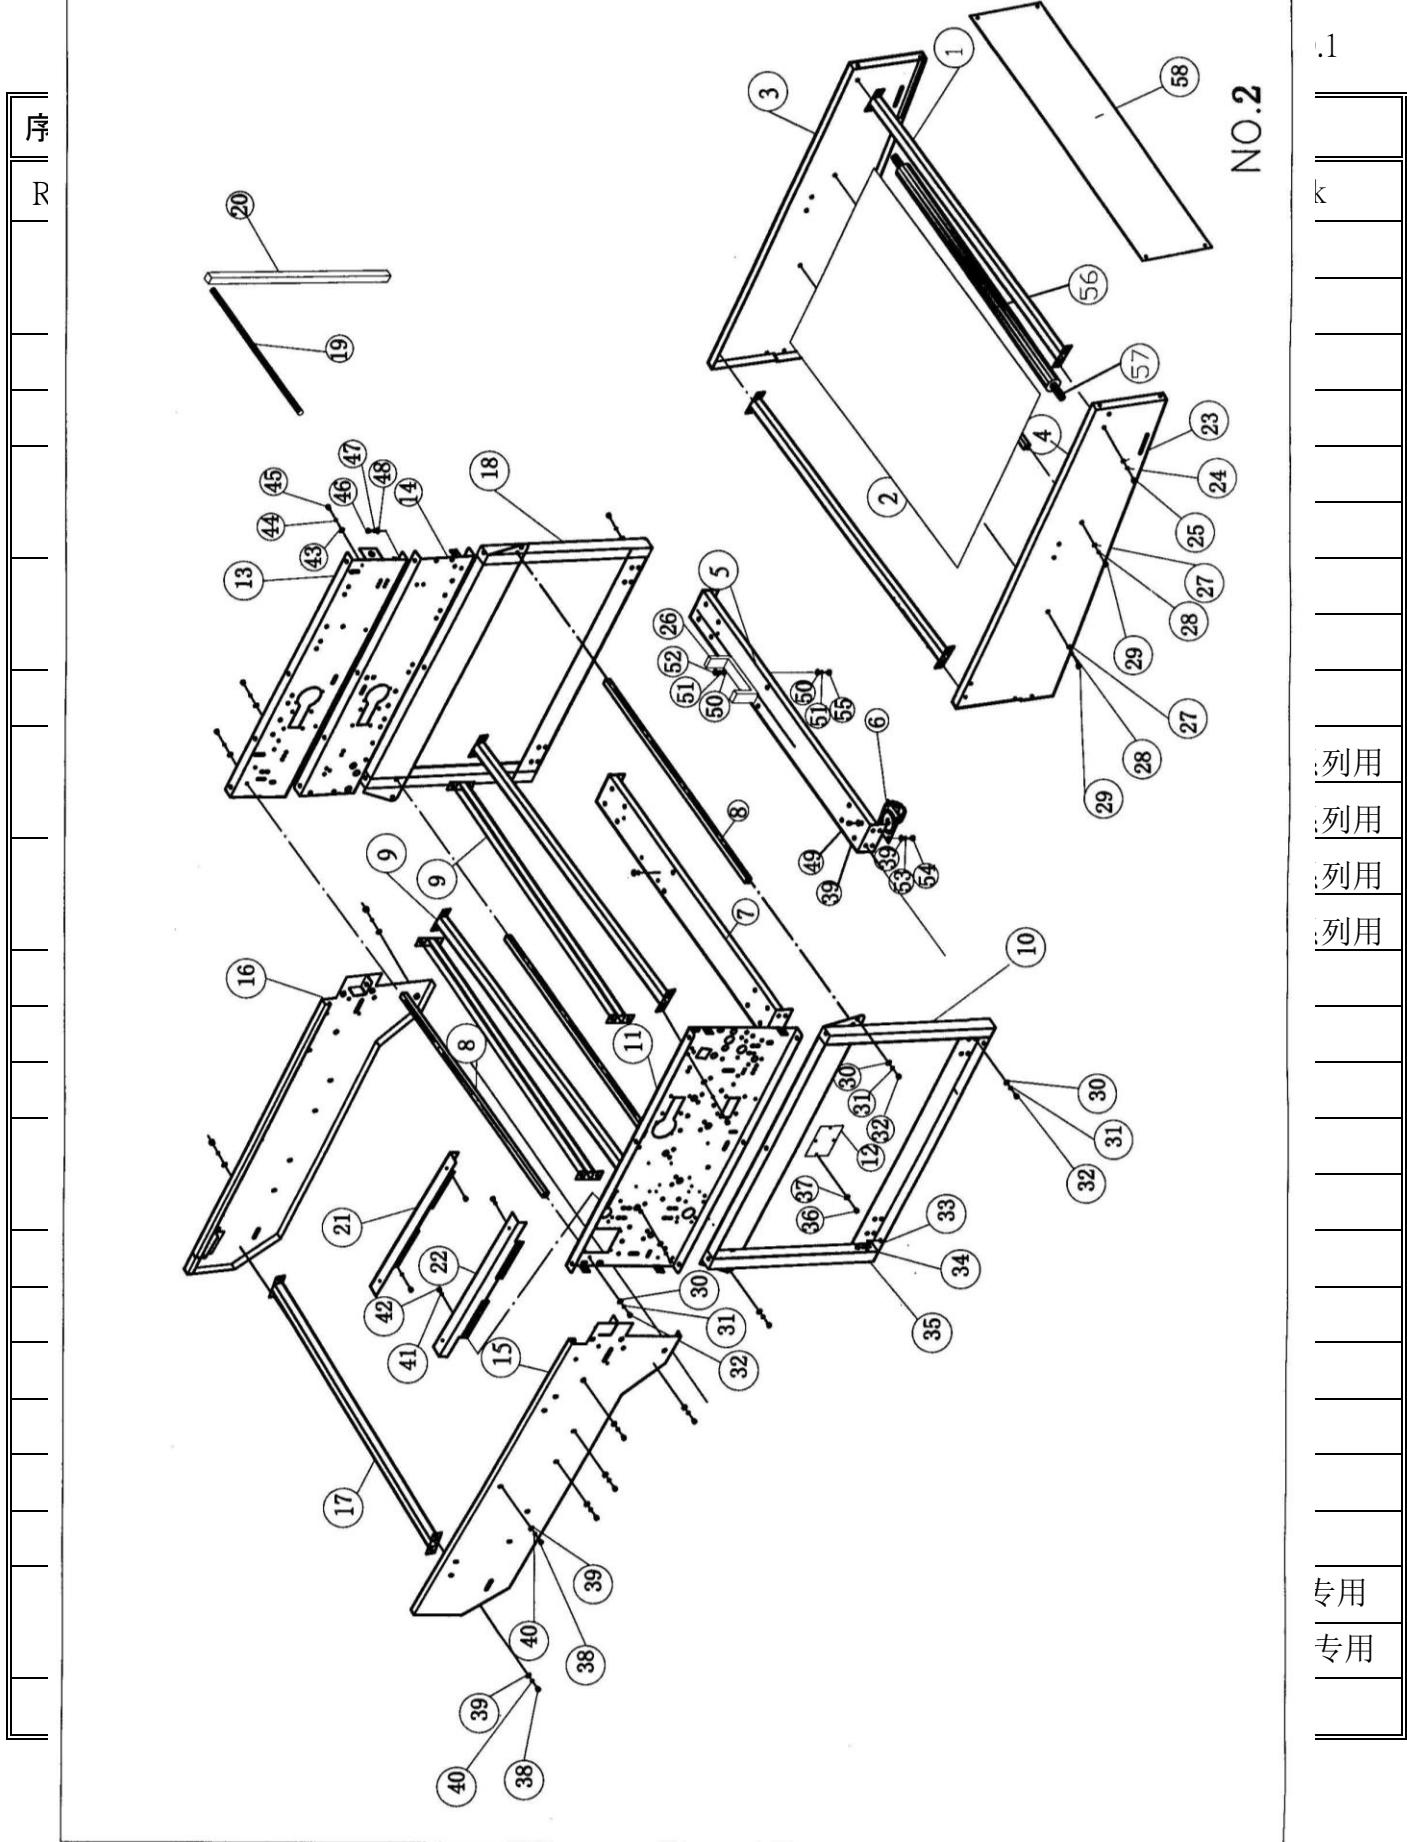

Put the oil into the oil tank near the back silicon roller. The white grease may be applied on adjusting screw shafts and bearings, so as to make the machine operate more smoothly.

#### (2.) Tension spring

It is for replacement, when the tension roller spring is out of function.
